

FastViewer Recertified by TÜV Süd

Neumarkt, 22th August 2018

FastViewer Instant Meeting, the online meeting solution for secure web conferencing, has been retested for data security, privacy and functionality and been recertified.

Already since the year 2008, the software solution FastViewer Instant Meeting has been awarded. Once again this year, this solution was recertified by the TÜV Süd Product Service. The **functionality** (according to ISO/IEC 25051:2014) and the **data protection** and **data security** (according to PPP 13011:2008) of the Instant Meeting solution were meticulously scrutinized and awarded the quality seal again. In addition to the coveted TÜV seal, FastViewer has also been awarded the Fiducia as well as the OPDV certificates, which are primarily used in the banking sector as a basis for making decisions concerning the use of software solutions.

It is, however, not just through the regular certification of your solution that the company FastViewer sets high standards when it comes to security.

Apart from the maximum possible **256-bit AES end-to-end encryption**, it offers your customers additional ways to not only feel safe when exchanging data over the Internet, but also to be actually secure.

For example, by selecting the locations of your communication servers, customers can decide whether global, pan-European or only **German FastViewer server** farms are to be used for communication. For all customers who swear by an **in-house solution** and want to communicate solely through your own server, FastViewer offers its own server solution, as well as the integration of any corresponding SSL certificates required.

For remote maintenance, access to the Computer Management of the remote solution can be additionally protected not only through encryption, but also via a **two-way authentication** process using SMS, which is frequently used for online banking as well. In order to prevent the unauthorized use of tools, it is possible to **assign rights** via the FastViewer User Management; for example, via the Active Directory groups already predefined by the customer.

Customization of the software to the company's corporate design and custom settings for functions are possible through the comprehensive customer portal, which is included in every FastViewer license.

With these and several other features, the company FastViewer offers secure, flexible and simple solutions for online communication and remote maintenance of companies from all business sectors, as well as banks and public institutions.
